Art Unit: 1632

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-6, drawn to a method of treating an individual having a neuroectodermal tumor by using a neuroectodermal tumor specific ligand fused to a cytotoxic moiety and a pharmaceutically acceptable carrier, classified in class 514, subclass 2.
  - II. Claims 7-14, drawn to a method of differentiating neuroectodermal tumor-derived neoplastic tumor tissue from non-neoplastic tissue by contacting a tissue of interest with labeled chlorotoxin and measuring the binding of the labeled chlorotoxin, classified in class 435, subclass 7.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are distinct from each other because they are drawn to materially different methods that differ in objectives, method steps, reagents and dosages used, schedules used, responsive variables, and criteria of success. They have different classifications and require separate search. Thus, inventions I and II are not obvious variants and are patentably distinct from each other.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1632

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
